

NEWS RELEASE - September 1st 2010

Control See adds OPC Scheduler to its U.C.ME-OPC™ software!

[Control See Ltd](#) announces the release of its **U.C.ME-OPC™** software product version 2010. This new version introduces scheduling functionality to the existing functionality – **Alarm notification** (via SMS, Pager, Email, Voice and Fax), **Remote control** (via SMS and Phone) and **Alarm analysis**.

Using the **U.C.ME-OPC™** Scheduler, customers will be able to schedule events and tasks and make their maintenance activities easier than before. No need to use external tools or PLC programming for scheduling. All solutions in one product!

Scheduled events are based on time, date or day-of-week. Event information can be sent to any phone recipient (as a text or voice message), Email recipient, Pager or Fax recipient. The event's email can also contain an attached file.

Tasks can be used to:

- Change field values and set-points
- Run Windows® programs
- Suspend/resume alarm notification
- Restart the computer
- Send a predefined text or voice message to any recipient
- And more...

Few examples for scheduled events:

1. Every day at 08:00 AM **U.C.ME-OPC™** can send the message "**U.C.ME test message**" to notify system administrators on their system availability.
2. Every morning at 9:00 AM **U.C.ME-OPC™** will turn **on** an air-condition unit.
3. Every evening at 6:00 PM **U.C.ME-OPC™** will turn **off** an air-condition unit.
4. On Sunday, September 12th **U.C.ME-OPC™** will run an external utility that will load a process recipe.

U.C.ME-OPC™ is alarm notification software that can connect to any SCADA application, DCS system or OPC server using OPC connectivity. Based on the information retrieved from these systems, alarms can be sent to any phone via SMS or Voice, Pager, Email or Fax.
