Goldberg elected chair of CSIA

May 11, 2011, MADISON, Wis. – Stephen M. Goldberg was elected to a three-year term as chairman of the Control System Integrators Association (CSIA). Goldberg succeeds Ed Diehl, who completed his term in April.

New directors elected to the board at the association's annual executive conference are:

- Eduardo Acosta, chief executive officer, Omnicon S.A., Cali, Colombia;
- Richard Brueggman, president and chief executive officer, Data Science Automation, Pittsburgh, Penn.; and
- Sam Hoff, president, Patti Engineering, Inc., Auburn Hills, Mich.

Lynda J. Patterson, CAE, FASAE, continues as president. Robert Lowe is the association's executive director.

Goldberg is director of information technologies at Matrix Technologies, Inc., a Certified CSIA member based near Toledo, Ohio. Among his top goals is to increase recognition of CSIA with end users.

"We want CSIA to be the first resource companies turn to when looking for help with system integration challenges," Goldberg says. "As part of this effort, we hope to build the reputation of the organization and acceptance of the CSIA certification program as the way to optimize the results for any system integration project."

During Diehl's term, CSIA membership grew by more than 12 percent and increased the association's presence in the international control systems integration community. Diehl is co-CEO and vice president of engineering and operations at Concept Systems, Inc., a Certified Control System Integrator headquartered in Albany, Ore.

About CSIA: Founded in 1994, the Control System Integrators Association is a global organization dedicated to helping its member companies achieve their highest potential by setting the standards for business performance. To learn more, visit www.controlsyst.org.
